

Individual Contributions

For this project, I researched Squeezenets and looked through the conference paper and github to find models which we could base our own SqueezeNet after. After the research was done and we both grasped a general understanding of a SqueezeNet, we built the Squeezenet model together. After both models were built, we ran through the analysis together, and jointly wrote the final report. As partners, one would write out any given section, and the other would proofread said section to ensure quality output.
